Permit to Work

Course Overview

The Permit to Work course gives learners an appreciation of the importance of their Permit to Work System and the role they play in avoiding accidents.

They will gain an understanding of their own role in the application of Permit to Work systems in the workplace.

Who is the course for?

Those who will be, or already are, working within a Permit to Work System and are currently able to complete suitable and sufficient risk assessments. Learners should already have an underpinning knowledge of hazard, risk and control measures.

Learning outcomes

- Recognise when a permit to work is needed.
- Understand the laws requiring permits to work.
- Understand the essential elements of a permit to work system.
- Understand the application of permit to work systems to contractors.
- Understand the requirements for managing isolations to plant, machinery and services.
- Demonstrate the ability to apply workplace precautions for specific risks, including hot work, confined spaces and excavations.
- Complete a permit to work to an appropriate standard.

Company benefits

- The Health and Safety at Work Act 1971 requires employers to provide systems of work that are “*safe and without risks to health*”. Making sure your employees can implement permit to work systems will ensure you are fulfilling your legal duties as an employer.
- 693,000 injuries occurred at work during 2019. Training your staff to correctly use a permit to work system will help reduce the likelihood of accidents and incidents by defining the hazards and control measures of high risk tasks.
- Encouraging good health and safety practices helps promote a positive safety culture throughout organisations, creating a safe working environment and protecting people, property and reputation.

Course Key Facts

Duration: 1 day
