Check Your Ladder

Step-by-Step

STILES

Make sure they are not bent or damaged, as the ladder could buckle or collapse.

RUNGS

Check each of the individual rungs. If they are bent, worn, missing or loose, the ladder could fail.

LOCKING MECHANISMS

Are any components or fixings bent, worn, or damaged? Ensure any locking bars are fully engaged.

FEET

If they are missing, worn or damaged the ladder could slip. Check the ladder feet when moving from soft/dirty ground to a smooth, solid surface to make sure the actual feet and not the dirt are making contact with the ground.
